### NOTICE OF ALLOWABILITY

1. The following is an examiner's statement of reasons for allowance:

The closest prior art is considered to be Nienhaus et al. (Surface Science, 445 (2000) 335-342) This reference teaches excitation of carriers by reactions on chemical surfaces with subsequent detection of the carriers as a current in the diode device, which was held by the Examiner to inherently possess the instantly claimed using, coupling, causing, and collecting steps, and to also inherently involve "converting the energy of the excited carriers into electrical energy", as claimed in previous versions of claim 1. However, there is no suggestion within this reference or the other prior art of record that the current produced by the carriers can be used to "energize a semiconductor device to emit electromagnetic radiation". Production of a chemicurrent on a picoampere level (e.g. Figure 4 of Nienhaus) can certainly not be considered to be an obvious or even feasible power source for any light emission device. Therefore, the claims are considered to be patentable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

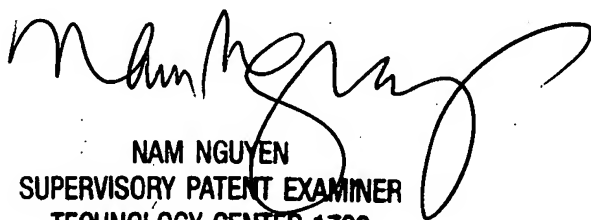

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Jeffrey T. Barton whose telephone number is (571) 272-1307. The examiner can normally be reached on M-F 9:00AM - 5:30PM.
